It runs on Mac or PC and supports both Maya and 3ds Max versions 2, 3, 4 and 5. From particle systems to subdivision surfaces, not just radiosity but full ray tracing. KRAKATOA™ MX is not a new product; Thinkbox Software first introduced the product back in 2005. But since then they have enhanced it in many new ways to meet the requirements of the VFX industry. KRAKATOA™ MX was specifically developed for the VFX industry because there is so much potential for using volumetric particle systems and ray tracing. In addition, the VFX industry has a huge amount of data that needs to be moved, and KRAKATOA™ MX allows this to be easily done. The other major benefit of KRAKATOA™ MX is that the VFX industry needs efficient and robust tools to view and manipulate their models and particle systems, not only to read and save them but also to render and manipulate them. KRAKATOA™ MX can do this very efficiently. KRAKATOA™ MX runs on the Mac OS X platform with a new 3ds Max integration that works with all versions of Max from 2, 3, 4 and 5. You can view, edit, render and render from within 3ds Max. The rendering is done by Matrox Imaging® with a powerful volumetric particle renderer and ray tracer. KRAKATOA™ MX runs on all 3ds Max versions, but it is recommended that the user has a 3ds Max V5 license and has it installed on the same computer as KRAKATOA™ MX. The basic version of KRAKATOA™ MX is free and has a 60 day trial period. For users who want more options, the pro version is available with all the extra features. For those who want a complete VFX solution, the Ultimate version is available. KRAKATOA™ MX Ultimate comes with all the features of both the Free and the Pro version. All in all, KRAKATOA™ MX is not just a render engine for 3ds Max, but a full toolkit. In addition to rendering and editing the volumetric particle system, you can add lighting and even create interactive views. The ray tracer can create a comprehensive light-flow environment and the entire toolkit can create a 3ds Max based VFX pipeline.
